

HCI AUTOBIOGRAPHICAL SKETCH

Chatree Campiranon

The Human-Computer Interaction (HCI) graduate program in the School of Informatics (IUPUI) has provided me a great experience during the past two years of study, and I am proud to be the first graduate from the program. Being an international student, it is not easy to get a job in the U.S. But with all the HCI projects and my thesis research as part of my portfolio, I was prepared to work as a Usability Analyst at Pearson Education, the world's leading educational publisher and producer of educational media.

My most memorable and valuable experiences as a student in the HCI program was in Dr. Faiola's classes. During class time, he encouraged students to study and discuss the text and course content according to our own understanding and experience, while adding his own insights and thoughts as an expert in this field.

Besides the discussion sessions, Dr. Faiola prepared many remarkable projects for students to finish as a group. All of the projects done in his class were used in my portfolio and in my final thesis research. (See below.) In sum, this, was one of the factors that advanced my career opportunity to where I am now. The program has equipped me with the necessary knowledge and skills to be capable to present my ideas and perform in the professional world.
